An aerial photograph of a modern, single-story cabin situated in a dense, green forest. The cabin features a light-colored, textured facade and a large, light-colored wooden deck or roof extension that cantilevers over a dark, paved area. The surrounding environment is lush with various trees, shrubs, and small clusters of purple flowers. A few fallen leaves are scattered on the ground near the base of the cabin. In the background, a dirt path leads up a hillside, and a person can be seen walking along it.

Ascendo a single-storey cabin, with an elevated platform, incorporated into the beauty of Vietnam.

Ascendo Overview

A single-storey cabin, with an elevated platform, incorporated into the beauty of Vietnam. Its features, which include the living room, patio, bathroom, bedroom, and overall layout are explicitly designed to give the residents the best opportunity to experience the beauty of the surrounding area.

Ascendo's main concept is building on the idea of a "tiny house" while being inspired by the design of The Interlace, Singapore. With reference to the overall design of the cabin, the three main structures are angled differently to break the monotony of the structure. The reason behind the design structure is to distinctively cover different viewing perspectives, in comparison to a rounded design that gives a plain and basic 360° view.

With its stacked design of different angles, this creates a wider field of view of the exquisite hillside and greenery that the area has to offer. The overall structure is built with wood, to integrate the cabin with the surrounding ambiance.

Living Room

Living Room

If residents need a space to relax and snooze, Ascendo's cozy and spacious living room provides just that. As many Asian countries believe in Feng Shui, the pieces of furniture are arranged to demarcate an area to ground their senses within the spacious region. As such, the residents will also be able to enjoy exploring the different aspects of the cabin, and then return to the comfort of their living room to unwind.

In Ascendo, the concept of a window in every room and living space is to make the residents be at one with the environment surrounding the cabin. In addition, the floor begins from a narrow start, that expands into a wider space. The gradual increase in the width and height of the structure is to create a sense of freedom and comfort. This aspect of Ascendo provides a change of environment to destress from our work life.

Bathroom

Interior

Bedroom

The bedroom is located at the highest point of the cabin to instil a sense of security and liberation. Ascendo is perfect for couples as the bedroom provides opportunities to build deeper relationships. The location of the bedroom also provides intimacy for them as it experiences the least amount of traffic and energy that runs through the space. In addition, it acts as a personal area for reflection, which is an important aspect of relaxation and tranquillity.

Bedroom

Patio

Ascendo also provides residents with a square-shaped patio. It includes a small kitchen (with all necessities) and a dining table, accompanied by a breathtaking view. The material of the two walls, which are facing outwards, is glass to act as a viewing gallery. Residents may use this space to let their imaginations run wild by looking at the vast landscape.

Patio

Lattice

To enhance the interior aesthetic design of the cabin, a lattice is specially designed to cast a shadow with a whimsical effect. It is strategically positioned in the middle of the cabin for it to be seen from every room. The lattice is a stacked combination of two patterns, an array of squares and circles. Circles were used as it represents unity and protection while squares symbolize a sense of reliability.
